

Reduction in harmful micro-organisms

Recent studies have shown that surfaces made with materials containing copper kill a wide range of potentially harmful micro-organisms - significantly reducing the number of these organisms that can come into contact with patients, visitors and staff*

Introducing the **ASH700 series of Copper Door Handles.**

Specifically developed as a result of *research conducted at Selly Oak hospital in Birmingham. Copper surfaces have been shown to kill up to 95% of all micro-organisms on them compared to similar materials such as stainless steel.

The 700 series of DDA compliant handles are available in a range of diameters and centres allowing you to replace your current handles hassle free.
